Am I doing this right? If I'm not, what should I do? A: I would just keep a list in the class (since it's available in every instance anyway) and set self.favorite\_tracks = [] in \_\_init\_\_ and then set self.favorite\_tracks = movie.get\_favorite\_tracks() in your get\_favorite\_tracks method. If you do it this way, you don't need to change the function's arguments. You can just say: self.favorite\_tracks = movie.get\_favorite\_tracks() If you want to pass a list to the function anyway, you can just call the function directly: self.get\_favorite\_tracks(movie.get\_favorite\_tracks()) Shattered (Wunderkind album) Shattered is the fifth studio album by Swedish Christian metal band Wunderkind.
