In this article, you will learn about the history of the internet from its origins to modern day through a series of interesting and informative websites. Starting with Hotmail, we'll go on to explore the roots of the internet and how it was developed. In addition, we'll look at how society has changed in response to its introduction. After going over what is known as "the three pillars" which began with development in 1969 by a computer scientist called J. C. R. Licklider at MIT, we will look at the development of technology, www.hotmail.com, bulletin board systems (BBS) and internet chat rooms. Near the end of this article you can find a list of websites that are connected to or are about the internet. What is www.hotmail.com ? It may be defined as an electronic service that provides users with access to an email account using POP3, IMAP4 protocols through Microsoft Windows, Macintosh OS X and mobile devices such as smartphones under various operating systems including Android or iOS.
